

Multifunctional Wheelchair Taxi with the approval of Adam Opel AG

The conversion is approved by Adam Opel AG.

The ramp is easy and light to operate. The ramp stands upright when a wheelchair is being transported. When no wheelchair is being transported the ramp folds flat and “closes” the lowered floor.

The conversion is invisible from the outside.

The air-suspension is approved by Adam Opel AG.

The air-suspension increases the driving comfort. It is also possible to lower the Vivaro with the air-suspension. This makes entering and exiting with a wheelchair even easier.

To improve the access of the front door and side door the Vivaro can also be **lowered side ways**.

The Vivaro **lowers 8cm** on the front right shock absorber.

For the Vivaro, B-style has developed the Reverse-Ramp. This ramp creates a **complete flat floor**, when the ramp is folded through.

The conversion creates a access height of 150 cm (vertically measured), is 88 cm wide. The ramp is 86 cm wide.

The Vivaro can transport 8 passengers or 5 passengers and 1 wheelchair. The original 3 persons bench folds are creates the place for the wheelchair.

The bench is M1 approved according to directive 74/408/EEG en 76/115/EEG.

B-style Automotive, for every mobility question we have a customized solution.
